The fossils of this forest from the Devonian period are considered a huge treasure.

Over the years, there have been various discoveries from ancient times. Archaeologists have discovered many artefacts that have taught the world about life during different eras. People are still discovering the truth about human civilisation and how they used to live and survive in this world. People have even found treasures, bones, ornaments, clothes, and many other artefacts, that have been kept in museums. A recent discovery has been made in the UK, where a group of scientists have found a forest that dates back to 390 million years. It has also been reported that scientists have also found a treasure near it.

According to reports, the 390 million-year-old forest is considered the oldest forest in the world. This discovery has been made by scientists from Cambridge University and Cardiff University in the areas of Devon and Somerset.

in the UK. They earlier thought that this place would not have anything related to historical significance, but they were proven wrong after the discovery.

The fossils of this forest from the Devonian period are considered a huge treasure and are also said to be the oldest plant fossils ever discovered in the UK. This discovery has broken the record for the oldest forest in the world, which was earlier held by a forest near New York, USA.
